

EPEC Outreach

ACTIVITIES

Our Aims

The EPEC Outreach Working Group is dedicated to all outreach activities carried out by early career researchers. Outreach plays an important role in the scientific community. By spreading scientific news to the public, we **inspire and engage different audiences with planetary sciences**. We strongly believe that **science is a collaborative effort** and we would like to improve the connection between science and society.

EPEC Outreach

The Outreach Working Group consists of members who are keen on doing outreach activities.

The main scope of the group is to encourage young researchers to do outreach.

Particularly, this is achieved, by:

- providing **opportunities to early career researchers** to do outreach activities
- Collecting **outreach material** to support members

Collaboration with Lectures without borders

Our group collaborates with Lecturers without borders and outreach group members have the chance to do outreach activities in the context of some events that Lecturers without borders organised.

How to Join

Everyone is **welcome to join our group** and start doing outreach!

If you would like to share your **public engagement story** and inspire other members, write to us. If you are **interested in joining our team** or **have any ideas for outreach**, again, write to us! We are looking forward to hearing back from you and inspire more people, especially the next generations.

Inspiring story of the month

One of our highlighted activities is called "Inspiring Story of the Month". The inspiring outreach stories carried out by EPEC members. The stories are published once every month. Every story works as a case study and acts as an effort to inspire and motivate others to do outreach activities! So far there are 30 stories published.
